SMOKING COMPOSITIONS

Y. Houminer and H. Grubbs
Chemical Research

This invention provides tobacco and non-tobacco smoking compositions which contain a heterocyclic-hydroxy-substituted carboxylate compound as a flavorant additive.

Schardt/D&O

11-7-80 Filed in PTO; assignment recorded.
9-14-81 Restriction requirement.
11-26-82 Response electing Group III (claims 11-31).
3-1-83 1st action indicating informal allowance.
4-18-84 Memo to inventors/manager recommending abandonment in view of art cited in corresponding foreign cases.
4-20-84 Amendment filed.
6-11-84 Farone indicated that no further action be taken in view of cited art.
12-5-84 Director review--Schardt reviewing this case and related DIVs.
7-10-89 Notice of allowance--claims 10-31 allowed.
8-9-89 Issue fee paid.
2-15-90 Depaoli asked to check status - Patent Office cannot locate file.
4-25-90 Letter from Depaoli--PTO quality control audit--to be re-examined.
10-4-91 Depaoli instructed to file status inquiry.
11-6-91 Depaoli checked with Examiner. Action was mailed 6/90 but wrong serial number was on it and it was directed to the wrong address. Case went abandoned but Examiner to re-activate and sent out new action.

Corresponding foreign applications/patents in: Argentina, Australia, Brazil, Canada, and Venezuela

METHOD AND APPARATUS FOR FORMING CONTAINERS WITH ROUNDED EDGES, AND CONTAINER BLANK FOR SAME (CORINTHIAN)

C. J. Campbell, Linda S. Latif, and H. Graboyes
Cigarette Technology

To produce a container with a rounded edge, the container blank is scored with several parallel, laterally spaced score lines adjacent the intended location of the rounded edge. When the blank is bent, a portion of the total deflection is absorbed by each score line so that the resulting container edge is a gradual curve rather than a single sharp crease. The ends of each scored region may be left unscored to further smooth the ends of the rounded contained edge. Methods and apparatus for forming the above-described blank are disclosed.

Glenn/F&N/Laughon

8-28-90 Filed in PTO.
12-17-91 Issued: 5073162.

Corresponding foreign application filed in Japan, Korea, and the EPO designating Austria, Belgium, Switzerland, Germany, Denmark, Spain, France, UK, Italy, Luxembourg, Netherlands, and Sweden.

(Project Art) PROCESS AND APPARATUS FOR THE SEMICONTINUOUS EXTRACTION OF NICOTINE FROM TOBACCO

R. Prasad and H. Grubbs
Tobacco Materials/Chemical Research

A process is provided for the improved removal of nicotine from tobacco. A nicotine-free solvent in the supercritical state is fed into a first end of an extraction system containing tobacco and a nicotine-rich solvent is discharged from a second end of the extraction system. Periodically a portion of extracted tobacco is discharged from the first end of the extraction system while simultaneously a portion of an unextracted tobacco is charged to the second end of the extraction system.

PM 1279 - SN 246768

(Bonded Ends) DROPLET JET APPLICATION OF ADHESIVE TO CIGARETTE ENDS

R. Gaudlitz, J. Washington, and H. McCafferty
Development Engineering

A method and apparatus are provided for applying an adhesive solution to the coal end of a cigarette by means of a precisely controlled liquid jet spray to bond shreds of tobacco in the cigarette end and to thereby reduce the amount of tobacco which falls out of the cigarette when shaken. The adhesive solution is sprayed by using a controlled continuous jet of the kind used in ink jet technology for the spraying of alpha-numeric character patterns. Electronic controls are employed to synchronize the formation of a series of droplets which are charged and deflected in prescribed paths to contact the coal end of the cigarette in a predetermined pattern. Circuits are provided to adjust the timing and phase of the charging mechanism to compensate for variations in the speed at which the cigarette is conveyed to a target area and for variations in the point of droplet formation.

(Filter Technology - Project Sauna) FILTER CIGARETTE

R. W. Newsome, A. S. Gergely, R. A. Thesing, W. T. Callaham, P. N. Gauvin, W. E. Claflin, and W. A. Nichols
Cigarette Technology

A filter cigarette comprising a tobacco rod and filter portion comprising a fluted tubular extrusion. The flutes are blocked intermediate the rod end and mouth end of the extrusion. The tobacco rod is circumferentially wrapped with a porous wrapper comprising a longitudinal band of perforations. The fluted tubular extrusion is attached with tipping paper to the tobacco rod. A mouthband and a rodband of perforations circumscribe the tipping paper. A rod of charcoal-impregnated filter material may abut the tubular extrusion.

(Manufacturing) METHOD AND APPARATUS FOR DETIPPING LOOSE CIGARETTES

**Michael A. Grove and Richard Thatcher
Engineering/**

The method and apparatus of this invention relates to detipping cigarettes at high speed without degradation of the tobacco in the tobacco rod. Cigarettes are fed onto a conveyor belt so that they are traveling in a direction perpendicular to their longitudinal axis. a rolling belt disposed above the conveyor belt straightens bent cigarettes and rolls uneven cigarettes. The cigarettes are then fed onto a fluted rotating drum and aligned on the drum by means of an optical sensor and an air jet so that the filter tip portion of each cigarette is adjacent either side of the drum. Rotating knives are properly oriented so they engage the cigarettes only at the point where the filter tip is connected to the tobacco rod and cut off the filters of the cigarettes.

Schardt/F&N/Ingerman
1-3-90 Filed in PTO with IDS; assignment recorded.
12-31-91 Issued: 5076291.

PM 1307 DIV - SN 665968

CRIMPED TEXTILE FIBERS AND STUFFER BOX APPARATUS AND METHODS FOR CRIMPING TEXTILE FIBERS

M. Hill and W. A. Nichols
FML/

An improved stuffer box used for crimping textile fibers, particularly fibrillated polyolefin films. The width of the stuffer box is related to the linear density of the fiber bundles to be crimped whereby there is one millimeter of width for each fiber bundle size in the range of from about 200 to about 750 denier. Pressure controlled hinged lid or fixed lid exit orifices may be employed. Also employed may be a distributing device for applying additive material to the textile fibers prior to crimping to enhance the crimping operation or to enhance the end use of the crimped fiber or both. Fibrillated polyolefin materials that are crimped in accordance with the invention are adapted for use in filter materials in smoking articles.

Schardt/F&N/Matthews/Ingerman
3-7-91 Divisional filed in PTO directed to claims 18-20 drawn to a crimped textile fiber.
9-17-91 Reassigned to Matthews.
9-20-91 Preliminary amendment filed.
10-31-91 1st action rejecting all claims (response due January 31--Matthews drafting response).

HOT ROTARY STAMPER APPARATUS AND METHODS FOR METAL LEAF STAMPING

Angel Amendola
Alford Packaging

A continuous sheet of metal leaf advanced at a constant rate is moved at variable velocity through a rotary die stamper such that between stamps the metal leaf moves at a velocity which is slower than the velocity of a substrate web; but just prior to stamping the metal leaf is accelerated by contact between the metal leaf and a raised die rotating at the velocity of the substrate web so that when the stamp occurs the metal leaf is traveling at a velocity substantially equal to the velocity of the substrate web. Varying the velocity of the metal leaf has the effect of minimizing the distance the metal leaf travels between stamps which conserves consumption of the metal leaf. Separate means for accelerating the leaf prior to stamping and decelerating the leaf after stamping also may be provided.

METHODS AND APPARATUS FOR OPTICALLY DETERMINING THE ACCEPTABILITY OF PRODUCTS

Kenneth A. Cox and Robert J. Maher

The appearance of a product is determined to be acceptable or unacceptable by computing a discriminant function or image from a plurality of two-dimensional images of products of the kind to be inspected. A two-dimensional image of the product is then formed and processed using the discriminant image to produce an output value which can be compared to a predetermined value used in computing the discriminant image. If the output value deviates from the predetermined value by more than a predetermined amount, the product has been found to have an unacceptable appearance.

(Beta) FLAVOR DELIVERY ARTICLE (SINGLE AG BED)

M. E. Counts, M. R. Hajaligol, C. H. Morgan, U. Smith, F. M. Sprinkel, F. V. Utsch,
Physical Research

Methods and apparatus for releasing flavor components from a flavor-generating medium using an electric heating element are provided. A non-combustion flavor-generating article uses electrical energy to power a heating element which heats tobacco or other flavorants. The flavor-generating medium is formed into a packed bed. Energy delivered to the heating element is regulated to maintain the flavor-generating medium at a relatively constant operating temperature to ensure a relatively constant release of flavor.

(Sigma) CATALYTIC CONVERSION OF CARBON MONOXIDE FROM CARBONACEOUS HEAT SOURCES

S. C. Deevi, M. R. Hajaligol, D. S. Kellogg, and B. E. Waymack
Physical Research

This invention relates to an improved carbonaceous heat source, particularly useful in a smoking article, comprising a carbon component and a metal species. Upon combustion, the metal species acts as a catalyst to convert substantially all of the carbon monoxide produced on combustion of the carbon component to a benign substance.

(Sigma) MANUFACTURING OF COMPOSITE HEAT SOURCES CONTAINING CARBON AND METAL SPECIES

S. C. Deevi, M. R. Hajaligol, H. V. Lanzillotti, A. C. Lilly, D. B. Losee, and M. L. Watkins
Physical Research

Improved method for making a heat source comprising metal carbides are provided. The metal carbides heat sources have ignition temperatures that are substantially lower than conventional carbon particles normally used in carbonaceous heat sources, while at the same time provide sufficient heat to release a flavored aerosol, from a flavor bed for inhalation by the smoker. Upon combustion, the heat source produces substantially no carbon monoxide. The metal carbide is prepared by pre-forming the metal species/carbon source starting materials into a shape, and converting them to metal carbide in situ, without substantially altering the shape of the starting materials.

CONDITIONING CYLINDER WITH FLIGHTS, BACKMIXING BAFFLES, CONDITIONING NOZZLES AND AIR RECIRCULATION

John C. Strang and Steve G. Muller
Engineering

An apparatus and method for conditioning tobacco or other similar materials. In the preferred embodiment, a conditioning cylinder comprises a plurality of flights, backmixing baffles, and ejection baffles, all mounted to the interior wall of a cylinder. Rotation of the cylinder mixes and conveys the material. A spray nozzle assembly is positioned adjacent to the entrance of the cylinder and comprises spray nozzles. The spray nozzles are aimed at a plurality of predetermined target areas within the cylinder for directing a conditioning spray onto the material in the target areas. A recirculation conduit recirculates air exiting the cylinder and, before reentering the cylinder, combines the recirculated air with ambient air from fresh air make-up ports.

SCINTILLATION TUBE DYNAMIC CALIBRATION MONITOR AND FEEDBACK REGULATOR

David E. Sharpe
Engineering

A scintillation tube dynamic calibration monitor and means for regulating the high voltage power supply to the detector are provided. In a preferred embodiment, a voltage boost current source provides an input voltage for a power out voltage regulator and for a +14.75 volt board regulator. The board regulator provides a voltage reference for various circuitry, and provides a voltage reference for coarse calibration and display calibration adjustment circuitry. The power voltage regulator provides the high voltage power supply drive signal. An error amplifier drives an integrator, which, in turn, drives a bargraph display. An optically-isolated output circuit drives an external alarm or relay. In an alternative embodiment, the pulse width of a detected circuit is linearized and converted to an analog control signal. The analog control signal drives conventional power supply control circuitry.

(Manufacturing/Cartier 10) METHOD WHERE EXPOSED FOIL ON TOP OF CIGARETTE BUNDLE IS FLAT
WITH NO APPARENT FOLDS

John D. Barnes, Howard H. Fishburne, Xuan M. Pham, and Linwood L. Pitt
Engineering

A method of folding foil around cigarette bundles where the exposed foil on the top of the bundle is flat with no apparent folds. The smooth flat appearance is created by forming the top folds prior to forming the side folds. Notches cut into the foil by which folding stresses on the outermost cigarettes in the bundle are reduced are also provided.

(Manufacturing/Cartier 10) CIGARETTE BOX ENDCAP INSERTION METHOD AND APPARATUS

Vic Maclauchlan
Engineering.

This disclosure is for a method and apparatus for inserting one or more endcaps into the ends of a cigarette box. The box is placed on a slide in the apparatus and the slide moves along a predetermined path through the apparatus. Along the path, the box is aligned and pushers push endcaps into the end of the cigarette box. A uniform box with a desirec cross-sectional shape is produced.

PM 1438 - SN 567806

(Manufacturing/Cartier 10) METHOD AND APPARATUS FOR ULTRASONICALLY BONDING ENDCAPS TO A CONTAINER OF DISSIMILAR MATERIAL

Jonah Adams and Steve Rinehart
Engineering

A method and apparatus are provided for ultrasonically bonding endcaps to a food or tobacco product container comprised of a material dissimilar from the endcaps. Ultrasonic vibration is applied to the joint between the container and the endcaps, which includes a strip of preapplied adhesive, so that the adhesive partially melts. The partially melted adhesive quickly resolidifies, providing a durable bond without the disadvantageous and time consuming use of wet glues. The apparatus includes a pair of opposingly mounted ultrasonic devices, a controller associated with each ultrasonic device, and a general purpose computer programmed to synchronize and monitor the controllers.

(Robotics) APPARATUS AND METHOD FOR REMOVING TOBACCO SHREDS FROM A CIGARETTE FILTER

Wayne B. Adkins and Jose I. Roncero
Development Engineering

An automated method and apparatus for removing tobacco shreds from the end of a smoking article filter severed from a tobacco containing smoking article, such as a cigarette. A mechanical arm of a robot, having opposing gripping members, is used to grip and insert the filter into the deshredding apparatus whereupon a deshredding tool is rotated to contact, and a stream of high-pressure air is simultaneously directed at, any tobacco shreds remaining in the tobacco end of the severed filter portion. An exhaust removes the loosened tobacco shreds. The robot then removes the filter from the apparatus. The filter is then ready to be subjected to characterization tests.

SCORED INNERFRAME FOR HINGED LID CIGARETTE PACK

X. M. Pham
Engineering

A hinged lid cigarette pack with rounded edges having an outer sleeve member within which is fitted an innerframe. The innerframe is provided with a front wall, side walls, rear walls and scored transitional panels interposed between the walls. The innerframe is bent about the score lines to conform closely to and fit within the contours of the rounded edges of the cigarette packs. The rear walls of the innerframe wrap around the cigarette bundle contained in the pack and frictionally engage the rear rounded corners of the pack, hinge and lid, thereby stabilizing the closed position of the hinged lid.

Glenn/F&N/Isackson/Panichi
11-25-91 Filed in PTO with preliminary amendment.

PM 1487 - SN 573884

APPARATUS AND METHOD FOR MAINTAINING CLOSED HINGED LID BOXES

X. M. Pham
Engineering

A hinged lid box having an innerframe and rounded corners and means for maintaining the box substantially closed. The means includes a second front panel of material affixed in superposition to the interior front panel of the box lid to engage the innerframe of the box, providing increased structural support and frictional forces that retain the box in a closed position. The second panel of material has approximately the same width at the lid panel and a height that is greater than 50 percent and less than 100 percent of the height of the box lid. The panel also may have tabs extending from the panel into the rounded corners of the box so that the tabs are interposed between the innerframe corners and the lid corners when the lid is closed.

PM 1488 - SN 573883

INTERLOCKING CLOSURE FOR HINGED LID BOXES

X. M. Pham
Engineering

A hinged lid box having an innerframe and interlocking means for maintaining the box substantially closed. The interlocking means includes a panel of material including a tab that is secured to the inside of the front panel of the lid so that the tab is opposed to but not secured to the lid surface whereby the tab is disposed to pass inside the innerframe during closure. The innerframe is thus frictionally engaged by the tab and the opposing surface of the front panel of the lid to retain the lid closed. The tab may be formed by a slit in the panel of material and provided with a score line to facilitate bending the tab at the desired location to engage the innerframe. The tab also may be formed by cutting a notch in the panel, thereby providing a space between the tab and the panel from which the tab is cut. The notch may be provided with a configuration that facilitates inserting the tab behind the innerframe. Means for raising the tab a distance above the surface of the panel of material also may be provided. More than one tab may be used, preferably two tabs spaced apart and proximate to the front corners of the lid. The interlocking means is suitable for boxes having rounded corners.

TAMPER-INDICATING WRAPPERS

R. J. Versic and D. D. Emerick (Ronald T. Dodge Co.)
Chemical Research

A tamper-indicating wrapper in which multi-layer, laminated wrappers wherein a visible change between layers of the wrapper indicate that the wrapper has been punctured or that there has been tampering with the wrapper or its contents. The wrapper may be composed of two or more plies of packaging material such as films made from ethylene vinyl alcohol copolymer or from polyolefins such as polypropylene. In one construction, a transparent or translucent laminated wrapper becomes opaque upon rupture or puncture. In other constructions, a transparent or translucent wrapper becomes colored at the site of the rupture or puncture.

PM 1514 - SN 661809

METHODS AND APPARATUS FOR OPTICALLY DETERMINING THE ACCEPTABILITY OF PRODUCTS

K. A. Cox, Henry M. Dante, and R. J. Maher

The acceptability of the appearance of objects such as consumer products is determined by forming an initial discriminant function as a composite of a relatively small number of images which are known to be acceptable. This initial discriminant function is then used to gather statistical information about how a first relatively large number of images compares to the initial discriminant function. Thereafter, this statistical information is used to select or aid in the selection of acceptable images from a second relatively large number of images, and the images selected as acceptable are used to refine the discriminant function. The refined discriminant function is then used (e.g., during actual product inspection) to determine which objects have an acceptable appearance and which do not.
